Senior FrontEnd Software Engineer with 8 years of experience building scalable web applications and enterprise platforms. Strong expertise in React.js, JavaScript, TypeScript, Next.js, and Redux, with practical experience in Java, Spring Boot. Experienced in developing high-performance, data-driven applications and REST APIs for enterprise environments.

SKILLS

React, JavaScript, TypeScript, Redux, NextJs, NodeJs, GraphQL, HTML5, CSS3, Java, Spring Boot, MySQL, Data Structure & Algorithms, Problem Solving, Git, Testing, REST API, Analytical Skills, System Design, Unit Test (Jest)

EXPERIENCE

ServiceNow — Senior Software Engineer

Sep 2025 – Present

- Working on the Impact application foundation team, integrating multiple enterprise systems with the Impact platform.
- Implemented role-based access integrations with upstream systems using Kafka, enabling data flow to downstream systems.
- Developed new application pages end-to-end, connecting UI, backend APIs, and databases.
- Implemented data synchronization and integration flows between client systems and the central Impact system.
- Worked on maintaining and enhancing existing application functionality, including API integration, data flows, and production issue resolution.

Tech and Tools: React, JavaScript, TypeScript, Java, Data Structure, CSS3, Unit Test, JIRA, Git, Node.js

Walmart — Software Engineer III

Jan 2022 – Sep 2025

- Contributed to the Store Allocation Insights Dashboard, which played a pivotal role in boosting Walmart's sales by 2%.
- Developed a visually appealing chart component with item removal analysis, quantity adjustments, dynamic filtering, axis customization, and top/bottom-performer filtering.
- Created ag-Grid to display item details, including sales, profits, and units, with efficient editing, search, filter, and pagination.
- Implemented amChart's map functionality to visually depict how specific items were distributed within particular store locations on city maps.
- Core contributor to Walmart's Category Space Allocation project — used Fabric.js to create dynamic floor plans, including product category placement, drag-and-drop rearrangement, cell-dimension adjustments, and category rotation.

Tech and Tools: React.js, TypeScript, Redux, Next.js, Node.js, Unit Test, Java, Spring Boot (Basic), Data Structure

HashedIn By Deloitte — Software Engineer II

Mar 2021 – Jan 2022

- Served as a React Developer for an internal website dedicated to Volunteer Search functionality.
- Created a responsive website for optimal user experience on desktop, tablet, and mobile.

- Developed and integrated functional and class components, enhancing functionality with GraphQL.
- Added reusable code modules to the project repository, speeding up future project completion.
- Actively collaborated with team members to brainstorm and propose new features and their implementations.

Tech and Tools: React, JavaScript, TypeScript, GraphQL, Data Structure, CSS3, Unit Test, JIRA, Git

MindTree — Engineer

Jun 2018 – Mar 2021

- Served as a Frontend Developer for a prominent Dubai hotel-chain booking website, including the renowned Burj Al Arab.
- Transformed client business requirements into an improved and functional user experience.
- Played an active role in code reviews, ensuring peer code adhered to coding standards.

Tech and Tools: React, JavaScript, REST API, Data Structure, CSS3, Git, JIRA
